

METASPLOIT-FRAMEWORK
PROJECT

Contents

- I** **Preamble**
- II** **Introduction**
- IV** **Mandatory part**
- V** **Bonus part**

Chapter 1

Introduction

You'll be able to search, use & keep yourselves in touch with the latest commons exploit available in metasploit-framework. With that said, Metasploit has many different possible use, and features, you should know most of the famous exploit, payloads (how some are different than others) and auxillarys.

Chapter 2

Mandatory part

Create a script that create payload according to which system you choose (options should be displayed), in the language you choose (at least 4 different languages), store this payload somewhere to be used as a RubberDucky payload. (through internet, local or directly inside the RubberDucky)

Chapter 3

Bonus part

Bonus list:

- The script should prepare the .dd itself for the specific payload just created.
- You can choose any method you prefer to inject/download and execute the payload into the targeted system.

(i will test the script with my own rubberducky)

The Bonus can only be done if your finished the mandatory part perfectly.
